

Infracontrol Online™

Just connect and take control

Infracontrol Online brings everyday benefit

Simplified operations and maintenance

All technical systems are managed by one and the same system regardless of function, make or mode of communication. The right information is sent to the right person without any hassle.

Save energy

It's easy to save energy in e.g. your lighting or heating installations by means of simple, flexible remote control.

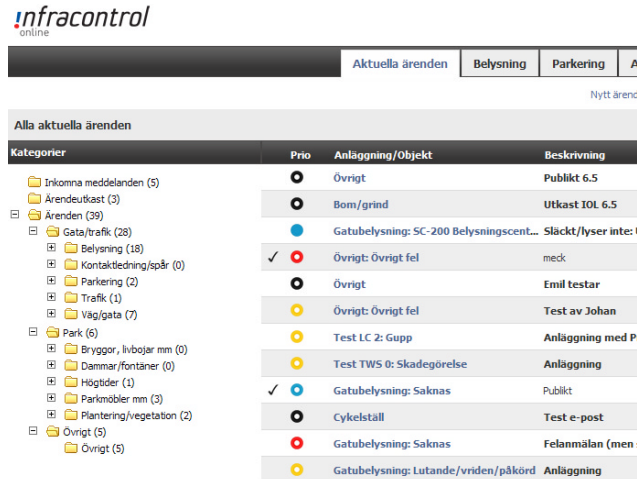

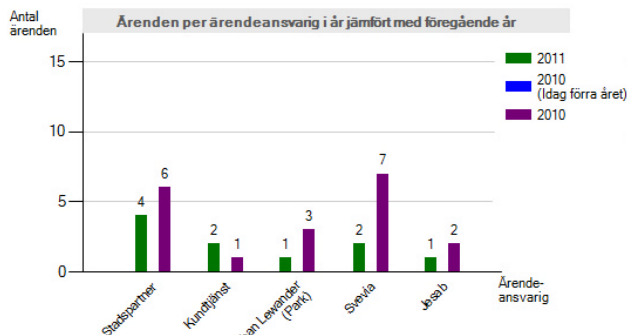

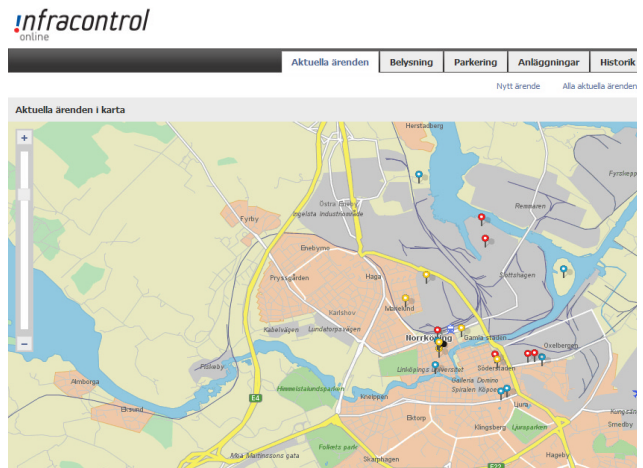

Provide more people with useful information

By gathering all information in a shared, open system it becomes available to everyone who needs it.

Easy to use

Infracontrol Online includes overviews in the form of maps and lists of connected installations where you can check their status and see any operations alarms. It also includes functions for reporting defects, remedial actions and for maneuvering control signals.

All current alarms are presented in an alarm list along with information on times, status and confirmations. User-friendly alarm histories allow interesting analyses to be performed with ease and there are comprehensive, powerful functions for sorting, filtering and searching information.

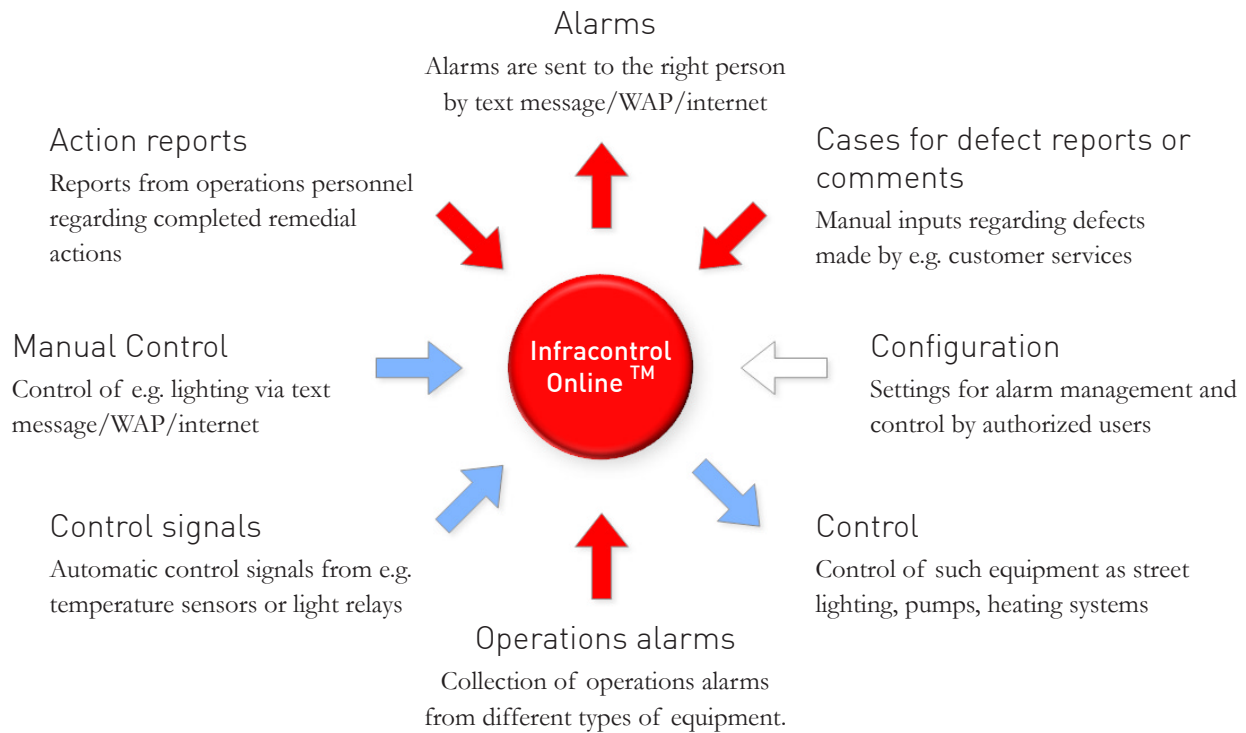

Accessible everywhere

Operations alarms registered by Infracontrol Online - automatically or via manual entry - are passed on to the appropriate individuals. Alarms are presented in text format in mobile telephones and confirmed upon receipt; completed remedial actions may also be reported via mobile phone.

The system includes functions for supervising alarm handling. If e.g. a confirmation is lacking or remedial action time is too long, a message is sent to the operations manager concerned.

All information is assembled in one place

Full control

Infracontrol Online's simple user functions provide full control over all installations. Everything is taken care of via the internet or your mobile phone; you can read alarms, report actions taken or control installations no matter where you are.

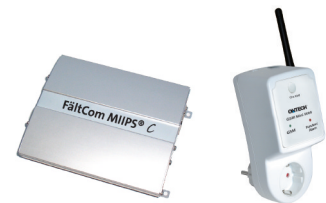

High reliability

Infracontrol Online ensures high operational reliability in all your installations. The right information reaches the right person fast. The system maintains a high level of reliability by means of double redundant hardware and security functions such as encryption and supervised communications.

Easy to connect

You can connect any sort of technical system you like to Infracontrol Online. This can take place via SMS, GPRS or other hard-wired or wireless connection. The addition of new installations to the system is simple and requires no specialist know-how.

This is Infracontrol Online

Infracontrol Online is a brand-independent, web-based service for control and supervision of technical installations connected to the system via hard-wire or mobile communications. The internet or mobile telephony provides access to simple, easy-to-read user functions for extremely low outlays. Infracontrol Online has been in real-world 24/7 operation since 2003 and has today 80,000 connections.

- Collection of operations alarms
- Cases for defect reports and comments
- Logging and distribution of alarms
- Manual and automatic control of connected systems
- Remedial action reports
- Powerful management of alarm and operations statistics
- Supervised communications
- Simple configuration of system functions
